Clinical Lexicon Setup Checklist

ACTIVITY	STATUS	RESPONSIBLE	COMMENTS
1. Lexicon data is stored in the LEX and LEXT globals. The file number range is 757 – 757.41. The package namespace is LEX.			
2. There are two major menus**, Lexicon Management Menu** and **Lexicon Utility Menu**. The **Lexicon Utility Menu** is recommended to be assigned to all users.			
3. The Lexicon files are not configurable by the sites. Lexicon updates occur with quarterly patch releases to Lexicon files, CPT, ICD Diagnosis, ICD Operation/Procedure, CPT Category, and/or CPT Modifier files.			
4. Lexicon is heavily used by the Problem List and TIU applications.			
5. The Lexicon Management Menus are mapping tools primarily used to customize lexicon for groups of users. In reality, little is usually done with these menus at most sites.			
6. Lexicon Utility Menu is recommended to be assigned to all users to customize default views, do lookups, etc. Again, it's not heavily used.
